

Historical caps overview

# Offering a proven strategy for stability

Despite the continuous drop in US Treasury bond rates over the past 10 years, the cap rates on John Hancock's indexed universal life (IUL) products have remained overwhelmingly consistent.

This is possible because of our proven investment strategy — a carefully orchestrated combination of favorable credit experience and our success in investing in alternative long-duration assets. Those alternative assets include investments in commercial real estate, private equities, farmland and timberland, resulting in more diversification than a portfolio allocated exclusively to fixed income investments.

For an example, see how our proven investment strategy has helped maintain our Capped Indexed Account cap rates on the IUL product we issued in 2011, compared to some of our key competitors.

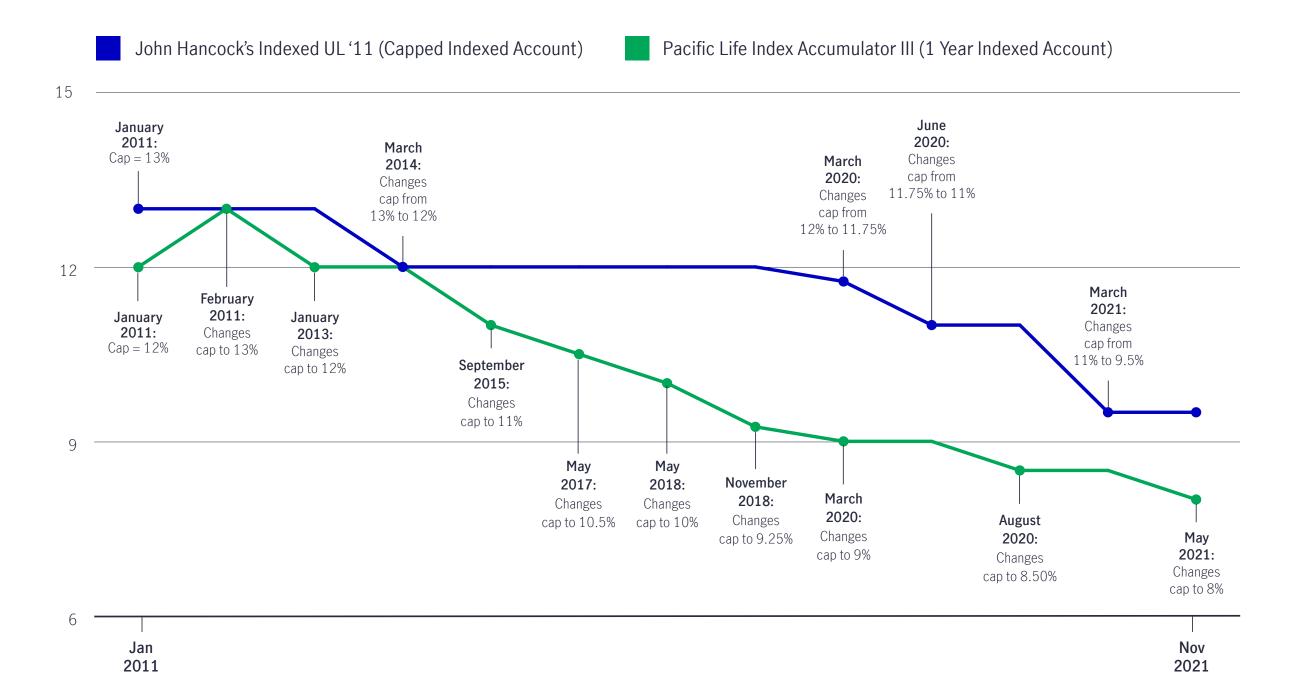

## Cap-rate comparison of John Hancock Indexed UL '11 and Pacific Life Index Accumulator III

### Strength. Stability. John Hancock.

John Hancock's strong ratings, as judged by the major rating agencies, are a comprehensive measure of the company's financial strength and stability. This is important because these financial ratings reflect the life insurance company's ability to pay claims in the future. With over 155 years of experience, John Hancock offers clients a diverse range of insurance products and services through its extensive network of employees, agents, and distribution partners.
