

The *power* of indexed crediting

With Accumulation IUL, Protection IUL and Protection SIUL, you can earn interest credits linked to the movement of a financial index. That gives your indexed universal life insurance policy more cash value potential, along with the protection of a 0% floor.

How indexed crediting works

With a John Hancock IUL policy, you have the flexibility to allocate among several Indexed Account options and a Fixed Account. Choosing one or more Indexed Accounts gives you an opportunity to capture upside market potential, while protecting the cash value against negative market performance. That's because each Indexed Account is linked to a financial index (e.g., S&P 500® Index or Barclays Index) and has a unique set of indexed account parameters (i.e., cap rate, floor rate, participation rate, and multiplier). The interest credits your policy earns will be based on the amount allocated among the available Indexed Accounts, as well as the performance of the corresponding financial index and the associated indexed account parameters.

The following charts show the historical performance of the S&P 500 Index and the Barclays Global MA Index (where applicable), as well as the segment growth rate that would have been applied for the indexed accounts held if a policy was in-force during that time.

Key IUL Terms

Cap Rate

The maximum annual Segment Growth Rate for an Indexed Account Segment

Floor

The minimum annual Segment Growth Rate for an Indexed Account Segment

Participation Rate

The percentage of the change in the index value that will be recognized when calculating the Segment Growth Rate

Guaranteed Multiplier

Interest credits provided in addition to the Segment Growth Rate

Accumulation IUL compared to the S&P 500 Index

Historical performance and indexed accounts segment growth rate results for one year indexed accounts

This example demonstrates what would have been credited with Accumulation IUL 21 reprice current cap and participation rates. Any new premiums designated to an Indexed Account(s) form new Segments on the 15th of each month and each has a one-year term. Unless these indexed account parameters are guaranteed, the indexed account parameters may be changed from time to time by the Company for any Segment created after the date of the change. Subject to a Lock-In Date of three business days. Source: S&P 500 Index data. Past performance is not indicative of future results. The example does not reflect any credits added to your account value or any charges deducted from it, such as the Indexed Performance Charge or the Guaranteed Indexed Account Multiplier. Excluding the Base and Select Indexed Accounts, the Index Performance Charge is either 4.98% or 1.98% annually (deducted monthly). The High Par Capped Indexed account reflects a current participation rate of 160% (140% guaranteed), all other accounts reflect participation rate of 100%. We encourage you to understand the risk and return profile of these accounts before using.

The above table shows hypothetical index change in the Barclays Global MA Index because the Index was created in 2021. The hypothetical index change is based on hypothetical values of the Barclays Global MA Index using the Index's rules as applied to the market conditions in prior periods and the values of the underlying components from December 2006 to December 2022. For periods prior to when these components were available, the values are based upon the hypothetical values using the securities or commodities that would have comprised the underlying components based upon their respective objectives. The hypothetical index change is shown to reflect how the Barclays Global MA Index values could have changed during these prior periods. The hypothetical values of the Barclays Global MA Index are prepared with the benefit of hindsight. There can be no assurances that the Barclays Global MA Index values will actually perform in the same manner as the hypothetical values. There are numerous factors which will impact actual performance, including general market conditions as well as whether the Index's rationale is successful or whether the Index can be constructed according to the Index's rules. These index changes shown in the table should not be considered a representation of past or future index change for the Barclays Global MA Index or the performance of the indexed accounts available under the policy. The table assumes the current indexed account parameters for the applicable indexed accounts. This example demonstrates what would have been credited to Accumulation IUL 21, reprice, Protection IUL 22 reprice and Protection SIUL 22. Any new premiums designated to an indexed account(s) form new segments on the 15th of each month and each has a one-year term. Unless these indexed account parameters are guaranteed, the indexed account parameters may be changed from time to time by the Company for any segment created after the date of the change. Subject to a Lock-In Date of three business days. Source: Barclays MA Index data. Past performance is not indicative of future results. The example does not reflect any credits added to your value or any charges deducted from it. We encourage you to understand the risk and return profile of these accounts before using. The Barclays Global MA Bonus Indexed Account reflects a current participation rate of 105% and the Barclays Global MA Classic Indexed Account reflects a current participation rate of 130%. The fixed bonus of 0.65% on Barclays Global MA Bonus Indexed Account is not included in the indexed return.

In summary

If the financial index performs at 0% or below, the associated Indexed Accounts are credited 0%.

When the financial index has positive performance

- **Base Capped Two Year Indexed Account** current cap rate is 24.00% for Protection IUL and Protection SIUL and 21.00% for Accumulation IUL
- **Select Capped Indexed Account** current cap rate is 8.50% for Protection IUL and Protection SIUL and 8.00% for Accumulation IUL
- **Barclays Global Multi Asset Bonus Indexed Account** current cap rate is N/A for Accumulation IUL, Protection IUL and Protection SIUL with a 105% current participation rate and a guaranteed fixed bonus of 0.65%
- **Barclays Global Multi Asset Classic Indexed Account** current cap rate is N/A for Accumulation IUL, Protection IUL and Protection SIUL with a 130% current participation rate
- **Capped Indexed Account** current cap rate is 7.75% for Protection IUL & Protection SIUL and 8.75% for Accumulation IUL
- **High Capped Indexed Account** current cap rate is 10.00% for Accumulation IUL, Protection IUL & Protection SIUL
- **High Par Capped Indexed Account** current cap rate is 7.00% for Protection IUL & Protection SIUL and 7.50% for Accumulation IUL
- **Enhanced Capped Indexed Account** current cap rate is 9.50% for Accumulation IUL
- **Enhanced High Capped Indexed Account** current cap rate is 12.00% for Accumulation IUL

Guaranteed Indexed Account Multiplier

Applied to interest earned in Indexed Accounts starting at policy year one and remains throughout life of policy.

For more information on this or other life insurance products, please contact your **insurance agent**.

Barclays shall not be liable in any way to the Issuer, Product purchaser or to other third parties in respect of the use or accuracy of the Index or any data included therein.

The Indexed Accounts use a point-to-point interest crediting strategy with one-year segments (except the Base Capped Two Year Indexed Account which has a two-year segment). The Index Segment Interest Credit proceeds are calculated and earned at Segment Maturity only. If the policy terminates for any reason, any unmaturing Segments will not earn interest credit.

See your policy for a detailed description of indexed account parameters and the Index Account Performance Charge and how the indexed account parameters are applied in the formula to calculate the Segment Interest Credit. Refer to your illustration for more information about how the policy will perform based on allocation to certain Index Accounts and the risks associated with each Indexed Account. Consult with your financial professional to ensure you understand how the indexed account parameters and the Index Performance Charge may affect your Indexed Segment Interest Credit.

There is risk as the performance of the underlying Index may result in low segment interest credits that would require increase in premium payments in order to keep the policy in force.

The life insurance policy describes coverage under the policy, exclusions and limitations, what you must do to keep your policy in force, and what would cause your policy to be discontinued. Please contact your licensed agent or John Hancock for more information, costs, and complete details on coverage to help you determine if this policy is suitable for your needs. Availability of policies, features, and benefits may vary by state.

The Fixed Account credits a declared rate that will never be lower than the guaranteed annual rate of 1% for Protection IUL, Protection SIUL and Accumulation IUL.

The policy does not directly participate in any stock or equity investments.

Insurance policies and/or associated riders and features may not be available in all states.

Guaranteed product features are dependent upon minimum premium requirements and the claims-paying ability of the issuer.

Insurance products issued by: John Hancock Life Insurance Company (U.S.A.), Boston, MA 02116.
