Volatility control indices	<p>J.P. Morgan MercurySM Index — A global multi-asset index with an equity allocation based on the current stage of the economic cycle, along with diversified fixed income and volatility-based commodities allocations to help provide more consistent returns. The index rebalances dynamically based on market conditions.</p> <p>BNP Paribas Global H-Factor® Index — A global equity index that helps provide more consistent returns using an equity selection methodology based on actuarial principles to identify and remove overpriced stocks with a higher probability of losing value. It includes additional risk management through dynamic allocations to fixed income.</p>																																																																
Multi-Index Monthly Average Index	<p>This index diversifies across 3 indices: the S&P 500®, Nasdaq-100® and Dow Jones Industrial Average®.</p> <p>The performances of these indexes are tracked over the course of a year, then averaged to determine the percentage of change within each index. The index segment interest rate is calculated using 50% of the best-performing index, 30% of the second-best and 20% of the third.</p>																																																																
S&P 500® Index	This American stock market index is based on the market capitalizations of 500 large companies listed on the New York Stock Exchange (NYSE) or Nasdaq and is widely considered a leading indicator of the U.S. stock market and the economy as a whole.																																																																

¹ Current rates are subject to change. Please contact the Life Insurance Solutions Center at 1-800-321-6064 for current rate information.

² The indexed strategy charge is applied at the creation of an index segment and deducted from the amount applied to that segment.

³ Instead of a cap rate, a spread rate applies to the 1-Year Uncapped S&P 500® indexed interest strategy.

⁴ This is the nonguaranteed Plus strategy credit.

Nationwide® Indexed Universal Life Accumulator II 2020

Fixed interest strategy	Current: 3.00%; guaranteed: 1%	
Plus strategy credit	A credit added to the crediting rate at the segment maturity. The Plus strategy credit is not guaranteed. Current credit: 0.60%.

FOR INSURANCE PROFESSIONAL USE — NOT FOR DISTRIBUTION TO THE PUBLIC

• Not a deposit • Not FDIC or NCUSIF insured • Not guaranteed by the institution • Not insured by any federal government agency • May lose value

This material is not a recommendation to buy or sell a financial product or to adopt an investment strategy. Investors should discuss their specific situation with their financial professional.

Be sure to choose a product that meets long-term life insurance needs, especially if personal situations change — for example, marriage, birth of a child or job promotion. Weigh the costs of the policy, and understand that life insurance has fees and charges that vary with sex, health, age and tobacco use. Riders that customize a policy to fit individual needs usually carry an additional charge.

Indexed universal life insurance policies are not stock market investments, do not directly participate in any stock or equity investments and do not receive dividends or capital gains. Past index performance is no indication of future crediting rates. Also, be aware that interest crediting fluctuations can lead to the need for additional premium in your client's policy.

Volatility control indexed interest strategies use reference indexes that attempt to limit reference index performance highs and lows, a concept that generally allows Nationwide to offer greater participation rates than are offered with other indexed interest strategies. There is no guarantee that selecting a volatility control indexed interest strategy will result in greater interest crediting than indexed interest strategies that do not use a volatility control reference index or that any interest will be credited for a particular index segment.

To receive the Nationwide IUL Rewards Program benefit in Nationwide IUL Accumulator II, net premium payments (all premium paid minus any loans or partial surrenders) must satisfy an accumulated premium test at the start of policy year 16 (or earlier for issue ages 51 or older). The required amount is set at policy issue and may change if policy changes are made. Once the requirement is met, the benefit is applied monthly at an annual rate of 0.20% from then on, as long as the policy is in force (assuming the segment is not depleted). The credit is calculated by multiplying the accumulated value minus any indebtedness on the date of calculation by the monthly rate; the credit will be added to the fixed interest rate strategy's accumulated value.
