FFIUL POLICY DESIGN

- **\$300** per month Target Face Solve gives her an initial death benefit of **\$397,000** that grows each year as the policy cash value grows through the increasing death benefit.
- When Mary is 65 and has paid in **\$108,000** over 30 years, the policy cash value has grown to **\$192,157**; and after switching the death benefit to level at age 65, the death benefit has grown to **\$576,390**.

Scenario 1: Mary at age 71 decides she needs to begin taking money out of her policy to supplement her retirement income for the next 20 years.

Mary can take out **\$6,837** annually each year over the next 20 years. The total amount she will be able to access through withdrawals and loans over that 20-year span is **\$136,740**.

Scenario 2: At age 70, an unforeseen event happens that qualifies Mary for long term care. Mary has a benefit of **\$576,390** available to her through the Long Term Care Rider to help pay for the cost of her care, which is outlined in her plan of care.

If Mary exhausts her entire benefit of **\$576,390**, her policy will still have a residual paid-up death benefit of **\$10,000**. This ensures that the policy will not lapse while she is alive.

Scenario 3: At age 63 Mary is diagnosed with a critical illness that reduces her life expectancy by 50%, and she files a critical illness claim.

The accelerated payout that Mary would receive in this nonguaranteed example would be **\$196,021**, and the policy's base face amount would be reduced by **\$357,300**.

* Clients may access the policy's cash value to receive tax-free supplemental income when needed, as long as the policy is not a modified endowment contract (MEC). Illustrations include hypothetical values that reflect nonguaranteed elements continuing for all years.

** Loans, withdrawals, and death benefit accelerations will reduce the policy value and the death benefit and may increase lapse risk. Policy loans are tax-free provided the policy remains in force. If the policy is surrendered or lapses, the amount of the policy loan will be considered a distribution from the policy and will be taxable to the extent that such loan plus other distributions at that time exceed the policy basis.

The policy premium and death benefit amounts used for these hypothetical cases are intended only to help demonstrate the planning concept discussed and not to promote any specific product. The values are broadly representative of rates that would apply for a policy of this type and size for the insured's health and the ages noted in the example and are not guaranteed. To determine how this approach might work for your client, individual illustrations based on their individual age and underwriting class, containing both guaranteed charges and guaranteed interest rates as well as other important information, should be prepared.
