

# John Hancock's indexed UL product portfolio

Offering more opportunities and choices for growth

**John Hancock's indexed universal life (IUL) insurance products combine industry-leading performance — with the flexibility to choose from a diverse range of indexed account options based on your appetite for risk. And, it's all backed by the strength and stability of John Hancock.**

## How IUL works

With a John Hancock IUL policy, you have the flexibility to allocate your premium payments among several indexed account options and a Fixed Account. Choosing one or more indexed accounts gives you an opportunity to capture upside market potential, while protecting your policy's cash value against negative market performance. That's because each indexed account is linked to a financial index (e.g., S&P 500® Index or Barclays Global MA Index) and has a unique set of indexed account parameters, including a cap rate, floor rate, participation rate and multiplier. Please see end of this document for definitions of these terms.

In short, the interest credits your policy earns will be based on the amount allocated among the available indexed accounts, as well as the performance of the corresponding financial index and the associated indexed account parameters.

The following charts shows the indexed account parameters by product.

# Indexed account parameters by product

Indexed account		Accumulation IUL	Protection IUL	Protection SIUL

	Current participation rate	165%	200%	160%

**Please note:** For all products shown, the indexed performance charge is guaranteed and annualized but assessed monthly. The indexed account options may not be available on all products or in all jurisdictions. The Base Capped Index Account and Base Capped Two Year Indexed Account are the only indexed account options available on Accumulation IUL policies issued in New York. Please consult your financial professional for available indexed account options.

There is risk as the performance of the underlying index may result in low segment interest credits that would require increase in premium payments in order to keep the policy in force.
